4,000-event bars: fitted conditional response

Q1: slowest
Q2
Q3
Q4
Q5: fastest

Normalized signed impact

4,000-event bars: fixed-state liquidity ratio

$\mathcal{L}(u,z)/\mathcal{L}_0(u,z)$

Five-minute bars: fitted conditional response

Normalized signed impact

Normalized imbalance $u = x/x_{med}$

Five-minute bars: fixed-state liquidity ratio

$\mathcal{L}(u,z)/\mathcal{L}_0(u,z)$

Normalized imbalance $u = x/x_{med}$
