
N = 1,000 events
N = 4,000 events
N = 16,000 events
Mean response $\bar{y}$ $(y_t = \mathrm{sign}(Q_t)\, r_t/\sigma^-_{24h,t})$
Imbalance ratio $q = |Q|/V$
Fitted exponent δ
Relative-activity decile ($\nu = V/V_{24h}$), low → high
pooled: δ in $x = |Q|/V_{24h}$ = 0.61
proportional ($\delta = 1$)
within decile: δ in q (95% day-block CI)
